

HB-5212

To prohibit the sale of smoke detection and warning equipment that is powered solely by a battery unless the equipment has a nonremovable, nonreplaceable battery capable of powering the equipment for a minimum of ten years.

Hundreds of people will die each year. Most people are not able to hardwire smoke detectors and will chose not to and die. if it doesnt beep with low battery no batter may be installed and when power is out they will not work. This is dangerous and you are horrible people for even presenting this. If people are lazy enough to not put a battery in let them die.
